

Ocean's Guardian's Lawn Replacement Drive

It's time to take the plunge and ditch your water-guzzling lawn!

For the next five people who sign our statement pledging to replace your lawn with a drought-tolerant alternative, we will offer you a free copy of Reimagining the California Lawn. And we will pay \$150.00 towards the purchase of your water-saving plants.

We will also be installing a demonstration native plant lawn and garden in front of our school to provide you with a first-hand look at how it's done. Please check our website for current updates on this project.

I Pledge to ditch my water guzzling lawn.

By replacing my lawn with a drought-tolerant alternative I will:

Conserve water, which means there will be more water available in my local streams and rivers for important ocean-going fish and wildlife, such as Steelhead Trout and Coho Salmon.

Reduce and eliminate the use of toxic pesticides and keep them out of my local creeks, watershed, and ocean.

Attract birds and beneficial insects that will help control mosquitoes and the "bad" bugs in my vegetable and flower gardens.

Support my local ecosystems by providing important bridges for wildlife between the remaining undeveloped areas near where I live.

In addition, because native plants require less watering, fertilizing, mowing or pruning, I'll spend less time maintaining and more time enjoying my new lawn or garden.
